Mathematics curriculum, which is often a focus in education reforms, has not received extensive research attention until recently. Ongoing mathematics curriculum changes in many education systems call for further research and sharing of effective curriculum policies and practices that can help lead to the improvement of school education. This book provides a unique international perspective on diverse curriculum issues and practices in different education systems, offering a comprehensive picture of various stages along curriculum transformation from the intended to the achieved, and showing how curriculum changes in various stages contribute to mathematics teaching and learning in different educational systems and cultural contexts. The book is organized to help readers learn not only from reading individual chapters, but also from reading across chapters and sections to explore broader themes, including: Identifying what is important in mathematics for teaching and learning in different education systems; Understanding mathematics curriculum and its changes that are valued over time in different education systems; Identifying and analyzing effective curriculum practices; Probing effective infrastructure for curriculum development and implementation. *Mathematics Curriculum in School Education* brings new insights into curriculum policies and practices to the international community of mathematics education, with 29 chapters and four section prefaces contributed by 56

scholars from 14 different education systems. This rich collection is indispensable reading for mathematics educators, researchers, curriculum developers, and graduate students interested in learning about recent curriculum development, research, and practices in different education systems. It will help readers to reflect on curriculum policies and practices in their own education systems, and also inspire them to identify and further explore new areas of curriculum research for improving mathematics teaching and learning.

Additional Mathematics Topical Revision Kit for GCE O Level (Singapore) Hodder Education

Pass with Distinction Secondary 1

Express Mathematics (By Topic) is specially written for students who wish to score excellent grades in their examinations. Based on the latest 2013 syllabus, it contains topical tests that serve to reinforce students' understanding of concepts and their ability to apply them to solve mathematical problems and problems in real-world contexts. There are six tests in each topic and the number of marks for each question is included as a guide to the amount of time that a student should spend on each question, approximately 1.5 minutes for each mark. Answers are provided at the end of the book. Step-by-step solutions are included in a separate booklet. We believe that the tests in this book serve as assessments as learning where students think strategically, consciously reflecting on their thinking processes and developing confidence in mathematics. It is hoped that this book will give students an edge in their forthcoming examinations.

This report is based on a study prompted by the need for improved effectiveness in the use of education resources in Uganda. Uganda's problem with increasing resource constraints for education is common in many developing countries and the lessons learned in this study may be of broad interest. Currently, Uganda allocates over 31 percent of its discretionary recurrent expenditure to education and 67 percent of this is allocated to primary education. Given increasing pressures on the budgets, there is need to implement strategies focusing on those inputs most likely to improve student learning. A major impediment to rational decision making in this area is lack of knowledge about what interventions work best and under what circumstances. Without this knowledge, Government may continue

spending scarce resources on inputs that may not directly contribute to student learning achievement.
