□ Why do some students achieve more than others? □ Do we have to wait until pupils are "ready"? □ Can children discover math for themselves? □ Does language interfere with the learning of math? This classic text, written from the viewpoint of the math teacher, provides answers to these and many more questions. Each chapter explores a particular issue that illustrates the interaction between theory and practice. New chapters have been included on cognition, pattern, and ICT.

The textbook has four chapters. Each chapter covers a grammatical point/component/element. Chapter 1 is a review of the BE verb. The BE is special and has its own rules (different from other verbs). Chapter 2 is the Present Progressive tense. This is the tense we use when we are talking about things happening now or near now. Chapter 3 is the Simple Present Tense. We use the Simple Present Tense to talk about facts, routines, and habitual activities. Chapter 4 is a comparison of chapter 3 and 4. Each chapter has the same "layout" (arrangement, presentation, design, organization). First there is a section to "activate", or prepare your mind for learning. It includes a discussion with your classmates. Next you read a story about

some ESOL students whose lives may be similar to yours. Then we break verb learning into many smaller sections for ease of learning, such as; affirmative/negative/yes/no questions/information questions (other important things to know)
