Drawing on a wealth of practical experience, both in the construction industry and teaching students,

Chris March presents this study of construction management and the major aspects of controlling the building process. Covering the stages from the client's initiation, to the final handover of the building, March includes evidence from those currently working in the industry, and covers the key industry requirements: knowing that in today's market place, those entering the field must be aware of how projects are financed and controlled, and to financially run and maintain a building. Finance and Control for Construction examines the various stages, from development, through the design, to procurement and post-contract processes, and culminates in a

discourse on facilities management. This book is written with a down-to-earth approach, with evidence supporting theories and principles, and is a book that students of construction management and related subjects need if they wish to succeed in the field.
