Coming on the eve of the Indian elections of 2009, *The Measure of Time in the Appraisal of Social Reality* is a timely and an explosive expose of what went wrong in Indian developmental planning. Focussing on the land, caste and gender issues, and

advocating a place-time-people based research agenda, the Measure of Time is a scathing critique of how the elite nexus between politics and academic neo colonialism has subverted the course of genuine development in India. This is a must read for those who wish to understand contemporary India.

When Samuel de Champlain founded the colony of Quebec in 1608, he established elaborate gardens where he sowed French seeds he had brought with him and experimented with indigenous plants that he found in nearby fields and forests. Following Champlain's example, fellow colonists nurtured

similar gardens through the Saint Lawrence Valley and Great Lakes region. In A Not-So-New World, Christopher Parsons observes how it was that French colonists began to learn about Native environments and claimed a mandate to cultivate vegetation that did not differ all that much from that which they had left behind. As Parsons relates, colonists soon discovered that there were limits to what they could accomplish in their gardens. The strangeness of New France became woefully apparent, for example, when colonists found that they could not make French wine out of American grapes. They attributed the differences they discovered to Native

American neglect and believed that the French colonial project would rehabilitate and restore the plant life in the region. However, the more colonists experimented with indigenous species and communicated their findings to the wider French Atlantic world, the more foreign New France appeared to French naturalists and even to the colonists themselves. Parsons demonstrates how the French experience of attempting to improve American environments supported not only the acquisition and incorporation of Native American knowledge but also the development of an emerging botanical science that focused on naming new species. Exploring the

moment in which settlers, missionaries, merchants, and administrators believed in their ability to shape the environment to better resemble the country they left behind, *A Not-So-New World* reveals that French colonial ambitions were fueled by a vision of an ecologically sustainable empire.

Pite Saami is a highly endangered Western Saami language in the Uralic language family currently spoken by a few individuals in Swedish Lapland. This grammar is the first extensive book-length treatment of a Saami language written in English. While focussing on the morphophonology of

the main word classes nouns, adjectives and verbs, it also deals with other linguistic structures such as prosody, phonology, phrase types and clauses. Furthermore, it provides an introduction to the language and its speakers, and an outline of a preliminary Pite Saami orthography. An extensive annotated spoken-language corpus collected over the course of five years forms the empirical foundation for this description, and each example includes a specific reference to the corpus in order to facilitate verification of claims made on the data. Descriptions are presented for a general linguistics audience and without attempting to support a specific

theoretical approach, but this book should be equally useful for scholars of Uralic linguistics, typologists, and even learners of Pite Saami.

 The comprehensive analysis of the segmental and metrical system of the Swiss German dialect of Thurgovian provides a significant contribution to both phonetic and phonological theory. Based on the author's original fieldwork and experimental investigations, it is the first in-depth study of this area, tracing it back also to its Old High German roots, particularly that of the dialect of Notker. Quantity alternations - notably word-initial long/short consonantal

alternations - asymmetric neutralization of phonetic-phonological contrasts, stress and weight are most prominent among the theoretical issues on which Thurgovian phonology is brought to bear.

Since the 1950s, Sound and Music Computing (SMC) research has had a profound impact on the development of culture and technology in our post-industrial society. SMC research approaches the whole sound and music communication chain

from a multidisciplinary point of view. By combining scientific, technological and artistic methodologies it aims at understanding, modeling, representing and producing sound and music using computational approaches. This book, by describing the state of the art in SMC research, gives hints of future developments, whose general purpose will be to bridge the semantic gap, the hiatus that currently separates sound from sense and sense from sound.

This book examines the exercise of power in the Stalinist music world as well as the ways in which

composers and ordinary people responded to it. It presents a comparative inquiry into the relationship between music and politics in the German Democratic Republic and Poland from the aftermath of World War II through Stalin's death in 1953, concluding with the slow process of de-Stalinization in the mid-to late-1950s. The author explores how the Communist parties in both countries expressed their attitudes to music of all kinds, and how composers, performers, and audiences cooperated with, resisted, and negotiated these suggestions and demands. Based on a deep analysis of the archival and

contemporary published sources on state, party, and professional organizations concerned with musical life, Tompkins argues that music, as a significant part of cultural production in these countries, played a key role in instituting and maintaining the regimes of East Central Europe. As part of the Stalinist project to create and control a new socialist identity at the personal as well as collective level, the ruling parties in East Germany and Poland sought to saturate public space through the production of music. Politically effective ideas and symbols were introduced that furthered their attempts to, in the parlance of the day,

"engineer the human soul." Music also helped the Communist parties establish legitimacy. Extensive state support for musical life encouraged musical elites and audiences to accept the dominant position and political missions of these regimes. Party leaders invested considerable resources in the attempt to create an authorized musical language that would secure and maintain hegemony over the cultural and wider social worlds. The responses of composers and audiences ran the gamut from enthusiasm to suspicion, but indifference was not an option. Sound to Sense, Sense to Sound Purdue
