has found that students learn best when concepts are built upon each other, growing from simple to complex, building on a

foundation of understanding . Organized by body systems, this heavily illustrated book organizes essential nursing

pharmacology information into focused, easy-to-learn steps. Building key concepts upon each other, the text gives students a solid foundation of understanding . Easy to understand drug prototype boxes are integrated throughout the book as well as integrated content summaries. It includes the popular and proven "Focus on" theme for drug use across the lifespan, cultural and gender considerations , evidence-based practice, patient teaching, herbal and alternative therapies and dosage calculation, with "Focus on Safe Medication Administration " and a "Drugs in Focus" table for each classification of drugs. Drug discussions include therapeutic actions and indications, pharmacokinetics, contraindications and cautions and adverse effects. Detailed rationales are presented throughout. Each chapter opens with Learning Objectives and a Glossary of Key Terms, and ends with NCLEX-style questions, and contains a case study-based critical thinking exercise with a discussion and case-based nursing care guide. Included in this package is Lippincott's Photo Atlas of Medication Administration (ISBN 97814511124

level in order to safely and competently practice as a newly qualified nurse. Praised for its helpful layout and jargon-free language, this updated edition introduces pharmacology in a friendly, informative way, without assuming previous knowledge or a level of confidence in numeracy. This new edition has been carefully expanded to include new chapters on cardiovascular pharmacology

and chemotherapy in cancer nursing. There are more details on drugs used in chronic and long-term conditions applied to nursing competencies and standards. It incorporates the new 2018 NMC standards for nursing education and links to practice guidelines. Additional case scenarios have been added spanning all areas of practice and include adult,

elderly care, child, mental health and learning disability applications. This allows nurses to apply their knowledge to a range of different people with varying and complex needs to enhance their application to practice. The book contains:

- 120 calculations and 130 multiple choice questions to assist you in assessing your learning as you work through each chapter •

Clinical tips boxes linking pharmacology to nursing practice • 50 person centred case scenarios across a range of practice settings • References to key standards and guidelines "The book also emphasises the application of the principles of pharmacology to all areas of practice and includes; drug action, drug interactions, side effects and adverse reactions. It is useful for all pre-registration

students and those on post qualifying or continuing professional development courses where pharmacology is a component. Overall, this book is an excellent resource for healthcare students that will support their learning throughout their training and beyond. It covers fundamental concepts of how the major classes of medications exert their therapeutic effect, but also how side effects and

adverse reactions can occur. Chapters on legal aspects of medication administration and drug calculations enhance this usefulness of this book – all of which are supported by example questions, calculations and clinical 'tips'. This book has been fully updated to reflect the 2018 NMC standards and as such provides a one-stop shop for any students studying safe administration of

medications." Dr Andy Powell, Physiology Lead for Nursing Birmingham City University "The outlay of the chapters is easily navigated and the level of the knowledge that the book starts at is at a basic level enough for any student nurse from year 1-3 to start with and builds in complexity. They are in lovely bite-size chunks that are easy to read and easily understood. The 10 MCQ's

at the end of a chapter are a very useful method of chapter consolidation and the case studies further reinforce learning." Georgina Cox, Senior Lecturer in Adult Health Middlesex University Deborah Robertson is a lecturer in nursing at the University of Salford. She teaches on the pre-registration nursing curriculum as well as being involved in post qualifying and post graduate

education. She is also author of Essentials of Medicines Management for Mental Health Nurses. Paul Barber was a Senior Lecturer at the University of Chester. He is co-author of Further Essentials of Pharmacology for Nurses (2012) and contributor and editor of Medicines Management for Nurses: Case Book (2013), all Open University Press. He is now retired.

Saunders
Master the basic principles of pharmacology and safe medication administration with Clayton's Basic Pharmacology for Nurses, 18th Edition. Known for its impeccably accurate and up-to-date drug content,

this best-selling text consistently underscores medication safety as it guides you in applying pharmacology information to the nursing process.

Introductory units acquaint you with the basic principles of pharmacology and medication administration, while subsequent body-system units prepare you to apply the nursing process to every major disorder. Clear guidelines cover safe

drug handling, the types of drugs used for disorders or to affect body systems, injection and enteral administration, and patient education.

From a respected author team, this full-color text also provides an excellent review for the pharmacology questions on the NCLEX® examination. Medication safety is underscored through Medication Safety Alerts and Clinical Pitfall boxes, as well as Do-

Not-Confuse and High Alert icons. Unit on medication administration clearly and visually outlines assessment, techniques, procedures, and documentation for safe administration of percutaneous, enteral, and parenteral drugs. Application of the nursing process offers an overview of general principles of nursing care for each disorder as well as specific nursing considerations for the drug treatment. Lifespan Considerations boxes for children and for older adults draw attention to information that would be especially important when giving a specific drug to patients of those age groups. Drug tables clearly outline generic and brand names, availability, and dosage ranges for key medications for each disorder. Clinical Goldmine boxes focus on best practices in the clinical setting. Get Ready for the NCLEX® Examination! section at the end of each chapter covers key points from the chapter as well as review questions to help prepare for course assessments and the NCLEX Examination. Video clips on medication administration procedures provide a visual reference for safe medication administration. Key terms

with phonetic pronunciations and text page references are listed at the beginning of each chapter. NEW! Chapter on Neurodegenerative Disorders covers drugs for dementia and Alzheimer's Disease. NEW! Updated guidelines on diabetes, heart failure, asthma, COPD, and cancer ensure readers are versed in the latest treatment protocols. NEW! Accurate and up-to-date

coverage includes the most recent FDA approvals, withdrawals, therapeutic uses, and content on cultural considerations related to each drug class. *Pharmacology for Nurses* Saunders Pharmacology for Nursing Care, 8th Edition , features a uniquely engaging writing style, clear explanations, and unmatched clinical precision and currency to
