For sample chapters, a video interview with David Hillis, and more information, visit www.whfreeman.com/hillispreview. Sinauer Associates and W.H. Freeman are proud to introduce Principles of Life. Written in the spirit of the reform movement that is reinvigorating the introductory majors course, Principles of Life cuts through the thicket of excessive detail and factual minutiae to focus on what matters most in the study of biology today. Students explore the most essential biological ideas and information in the context of the field's defining experiments, and are actively engaged in analyzing research data. The result is a textbook that is hundreds of pages shorter (and significantly less expensive) than the current majors introductory books.

This presentation describes various aspects of the regulation of tissue

oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system. The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries. The cardiovascular system then moves the oxygenated blood from the heart to the microcirculation of the various organs by convection, where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal cells of each tissue by diffusion. Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate (ATP), the energy currency of all cells. The mitochondria are able to produce ATP until the oxygen tension or PO₂ on the cell surface falls to a critical level of about 4–5 mm Hg. Thus, in order to meet the energetic needs of cells, it is important to maintain a continuous supply of oxygen to the mitochondria at or above the critical PO₂. In order to accomplish this desired outcome, the cardiorespiratory system, including the

blood, must be capable of regulation to ensure survival of all tissues under a wide range of circumstances. The purpose of this presentation is to provide basic information about the operation and regulation of the cardiovascular and respiratory systems, as well as the properties of the blood and parenchymal cells, so that a fundamental understanding of the regulation of tissue oxygenation is achieved.

Everything you need to know about Adult Nursing...at a Glance! Adult Nursing at a Glance is the perfect companion for study and revision for Adult Nursing students from the publishers of the market-leading at a Glance series. This title blends up-to-date evidence and essential knowledge from expert experience of nursing practice, research and teaching, in an easy-to-follow guide for student and newly qualified nurses. Adult Nursing at a Glance covers the essential components of excellent nursing, highlighting the skills that all students need to develop from the outset of their studies, and encompassing

organisational and leadership skills. With an emphasis on patient care and dignity, this title is the perfect guide to healthcare delivery, management and professional development. • Follows a simple structure based around systems of the body for quick access to information, with the most common disorders of these systems • Is accompanied by a comprehensive companion website with self-testing features • Ward and Primary Care covered throughout the text • Contains all the information you need to provide the best patient care, including care planning, symptom control, communication and health promotion. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from iTunes, Google Play or the MedHand Store.

Biology Elsevier Health Sciences Respiratory System, 2nd Edition provides a concise and highly visual approach to the basic sciences and clinical pathology of this body system. This volume in The Netter Collection of Medical Illustrations (the CIBA "Green Books") has been expanded and revised by Dr. David Kaminsky to cover important topics like pulmonary hypertension, COPD, asthma,

drug-resistant TB, modern endoscopic and surgical techniques, and more. Classic Netter art, updated illustrations, and modern imaging make this timeless work essential to your library. Access rare illustrations in one convenient source from the only Netter work devoted specifically to the respiratory system. Get a complete overview of the respiratory system through multidisciplinary coverage from physiology and biochemistry to adult and pediatric medicine and surgery. Gain a quick understanding of complex topics from a concise text-atlas format that provides a context bridge between primary and specialized medicine. Grasp the nuances of the pathophysiology of today's major respiratory conditions—including pulmonary hypertension, COPD, asthma, environmental lung disease, sleep disorders, infections of the immunocompromised, neonatal breathing disorders, and drug-resistant TB, and modern endoscopic and surgical techniques—through advances in molecular biology and radiologic imaging. Benefit from the expertise of the new editor, David Kaminsky, MD, who

contributes significant experience in asthma and general pulmonary and critical care medicine, and his team of world class contributors. Clearly see the connection between basic and clinical sciences with an integrated overview of normal structure and function as it relates to pathologic conditions. Apply a visual approach—with the classic Netter art, updated illustrations, and modern imaging—to normal and abnormal body function and the clinical presentation of the patient. Get the foundation you need to be a successful support worker in both community and institutional settings with Mosby's Canadian Textbook for the Support Worker, 4th Edition. With a clear student-friendly approach and step-by-step descriptions, this text walks readers

through all the information and skills that support workers (including resident care aides and health care aides) need to master to perform their role safely and effectively. Numerous full-colour illustrations, photographs, and tables are combined with real life case studies, examples, and insightful feature boxes to provide an outstanding learning experience. This new edition also features a new chapter on working in acute care; updated content reflecting the latest trends, issues, and practice standards; and a full assortment of online learning resources. With all this included in one great book, it's no wonder that Mosby's is the #1 text used by support worker programs across Canada. Comprehensive coverage guides readers through all information and skills needed by today's support worker. Student-friendly writing style enables readers to easily grasp the material. Providing Compassionate Care boxes highlight the caring aspect of the support worker role. DIPPS icons appear throughout the text to remind readers of the principles of support work: respecting and promoting their client's Dignity, Independence, Preferences, Privacy, and

Safety. Focus on Communication boxes offer guidelines for how to clearly communicate with residents and avoid comments that might make them uncomfortable. Promoting Safety and Comfort boxes emphasize the importance of the patient's or resident's safety and comfort. Focus on Children and Older Adults boxes provide age-specific information about special needs, considerations, and circumstances of children and older adults. Focus on Long-Term Care and Home Care boxes highlight information vital to providing competent care in the long-term and home care settings. Teamwork and Time Management boxes feature specific guidelines to help nursing assistants work most efficiently whether independently or as part of the health care team. Supporting boxes present scenarios about particular clients and discuss how support workers make decisions and solve problems. Think About Safety boxes provide clear, concise, easy-to-follow advice on how to provide safe care to clients of all ages. Case Study boxes apply some of the concepts discussed in the text to real-life examples of support workers

and clients. Focus on Home Care boxes highlight information necessary for safe functioning in the home setting. Respecting Diversity boxes cover the influence of culture on health and illness practices and the importance of sensitivity to cultural diversity in support work. Chapter review questions test reading comprehension of the learning objectives established at the beginning of each chapter.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be

particularly susceptible, and to assessing the potential risks of tobacco products.
