The Modern Refrigeration and Air Conditioning Lab Manual has been designed to accompany the text, Modern Refrigeration and Air Conditioning. Completing these lab activities will help you to master the principles of HVACR operation and service. This Lab Manual is designed for specific hands-on activities. However, these lab activities can be expanded or modified. Completion of an activity will depend on the equipment available, course objectives, and the individual instructor. Each lab activity has specific objectives that are achieved by the completion of the assignment. References to chapters in the Modern Refrigeration and Air Conditioning textbook allow you to review the related content prior to or while performing the activity. The specific equipment required for the activity is listed as an aid to preparation. Review questions are also part of the lab activities to help you fully understand the concepts involved. Safety is an important part of all activities. The primary causes of accidents are carelessness and lack of knowledge of the correct operating and working procedures. It is essential that good safety habits begin in the lab setting. Basic safety procedures for various conditions are identified in this Lab Manual. Each lab activity also includes a list of safety reminders relevant to the lab activity. This Lab Manual will enhance

the quality of your training. Through the use of "hands-on" experience, you will learn to size, install, maintain, service, and repair various types of heating, air-conditioning, and refrigeration systems.

Bureau of Ships Manual: Refrigerating plants (1956) IntraWEB, LLC and Claitor's Law Publishing
This user's manual was developed as a companion document to ASHRAE Standard 15-2001. It does not reflect the addenda and changes incorporated into Standard 15-2004. The User's Manual clarifies the intent of the Standard and provides an explanation of the rationale behind it. It eases use of the standard by including illustrations and examples of accepted industry practice, as well as explanations of and supporting references for formulas in the Standard. This guide also covers building, system, and refrigerant classifications, restrictions on refrigerant use, installation restrictions, and equipment and system design and construction. The User's Manual includes information on mechanical and absorption refrigeration systems for commercial, residential, and industrial applications.

The Refrigeration Library Goodheart-Wilcox Publisher

The report discusses the operation and service instructions for the spacecraft ground cooling auxiliary refrigeration unit, 52E180172. The report presents a description of the unit, its controls and their functions, and servicing instructions for preventive maintenance. (Author).
